The paper reference is shown at the top of this page. Check that you have the correct question paper. Answer **ALL** the questions in the spaces provided in this question paper.

Show all the steps in any calculations and state the units.

Calculators may be used.

Information for Candidates

The total mark for this paper is 120. The marks for parts of questions are shown in round brackets: e.g. (2).

This paper has 16 questions. All blank pages are indicated. Useful formulae are given on page 2.

Advice to Candidates

Write your answers neatly and in good English.

FORMULAE

You may find the following formulae useful.

energy transferred = current × voltage × time
$$E = I \times V \times t$$

pressure × volume = constant
$$p_1 \times V_1 = p_2 \times V_2$$

$$\frac{\text{pressure}}{\text{kelvin temperature}} = \text{constant} \qquad \frac{p_1}{T_1} = \frac{p_2}{T_2}$$

frequency =
$$\frac{1}{\text{time period}}$$
 $f = \frac{1}{T}$

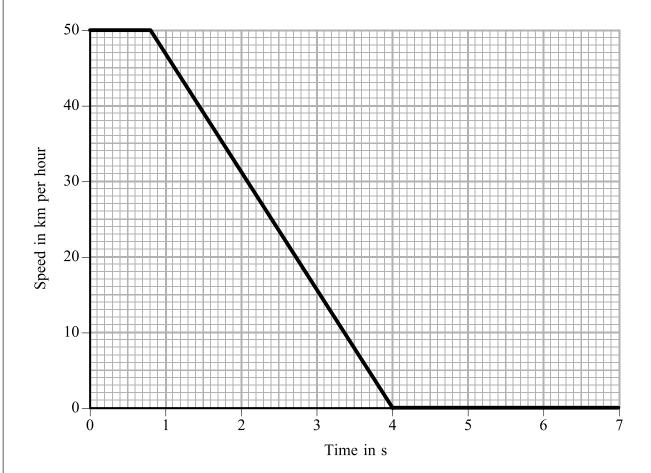

$$power = \frac{\text{work done}}{\text{time taken}} \qquad P = \frac{W}{t}$$

power =
$$\frac{\text{energy transferred}}{\text{time taken}}$$
 $P = \frac{W}{t}$

Where necessary, assume the acceleration of free fall, $g = 10 \text{ m/s}^2$.

1. (a) A child runs out in front of a car. The driver makes an emergency stop. The graph shows the speed of the car from the time when the driver sees the child on the road.

(i) State the driver's reaction time in seconds.

(ii) State the time in seconds for the brakes to stop the car.

(iii) Draw **two** more lines on the grid above to show how the speed might change if the driver has been drinking alcohol **and** the road is slippery.

(2)

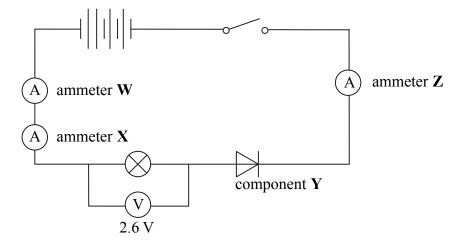

Leave blank (b) The condition of the tyres and the condition of the road surface are two factors which affect the force of friction on a car. (i) Name one other factor which affects the force of friction on a car. **(1)** (ii) The diagram shows a car. The centre of gravity of the car is at the point labelled X. Add to the diagram an arrow showing the weight of the car. Q1 **(1)** (Total 6 marks)

10. A student used pins to trace a ray of light through a block of glass of refractive index 1.5. She produced the diagram shown below.

It shows a ray of light being refracted with an angle of refraction of 40°.

| | | | | | ~ - | |
|-----|-----------|--------------|---------------|--------------|------------|----------|
| (a) | Calculate | the anole of | of incidence. | in degrees | of the ray | af light |
| (a) | Carcurate | me angle o | miciachee. | III ucercos. | or me rav | OI HEIIL |

Angle of incidence =°

(b) The experiment is repeated with a 'block' of water. The refractive index of water is 1.3. The same angle of incidence is used.

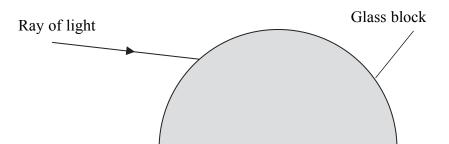

(i) On the diagram above draw the refracted ray for a 'block' of water.

(1)

(ii) Explain the direction of the ray that you have drawn in (i).

(2)

(c) The diagram below shows a semicircular glass block. An incident ray is drawn. Add one more line to the diagram and mark the angle of incidence, *i*, for this ray.

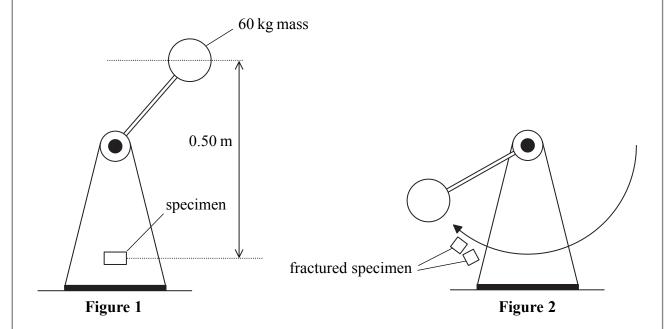

(2) Q10

(Total 8 marks)

Leave blank

11. A class of students was taken to a materials-testing laboratory. The diagram shows an impact tester that they saw during their visit. The tester measures how much energy is needed to fracture a specimen of a material.

The mass is raised as in Figure 1. When released it falls and collides with the specimen. If the specimen fractures, the mass may have sufficient energy to follow through up to a certain height as in Figure 2.

(a) Use the phrases from the box to write a word equation.

energy required to fracture the specimen
final gravitational potential energy of the mass
initial gravitational potential energy of the mass

| • | ••••• | ••••• | ••••• | |
|---|-------|-------|-------|--|
